INTRODUCTION

Brief History

Company Goal

BRIEF HISTORY & OBJECTIVE

Brief history

In 1990 ASHARQ AL-BAEID COMPANY was born competing among top contracting companies in the Kingdom with a very minimal workforce.

Widening the company's construction network in the kingdom, additional manpower was immediately mobilized to sustain the fast growing project demand from the government, i.e. The National Guard, SCECO, Aramco, Saudi Telephone and other top private companies, especially in the industrial field, wherein we have most of our clients.

At present, The Board of Company is composed of 3 members including Mr. Saud Al-Qahtani (Chairman), Mr. Osama Qattuni (The Director) and Mr. Tariq Nassar (Executive Director).

ASHARQ AL-BAEID CO. has a well-designed organizational structure segregated among various functions to handle the company's operations efficiently. Construction management team comprise professionals with decent past experience.

ASHARQ AL-BAEID as we are popularly known today has successfully completed numerous Projects in just a very short period of operation. All this became possible because of the constant supervision and thorough management in all of our projects by our professional staff whose expertise contributed a lot in Construction and Engineering business.

ASHARQ AL-BAEID CONT. now has three main division, they are as follows:

1. Civil works and finishing division
2. Electro-mechanical division
3. Steel structural & Pre-engineered division

All these divisions are working together or individually in various projects under close and proper supervision.

Objective

Our main goal is to exceed the Client's satisfaction by giving them the final accepted project in a very reasonable price, inclusive of all supporting consultation and needed services.

PROJECT COMPLETION CERTIFICATE

Project Name: Building of a New Production and Storage Facility Plant in Saudi Arabia.
Name of Owner: RAVAGO Middle East Company – Belgium.
Location: SADARA Industrial Area-2, Jubail.

Attn: Engr, Mohamed Demnati,
 Project Manager.

The Construction Contractor Asharq Al-Baeid issued Project Handover Letters to Project Management Consultant (PMC). Based on the mentioned letter PMC had been constituted a Joint Inspection Team (JIT) comprising of representatives from RAVAGO, PMC and Main Construction Contractor to make the final inspection jointly and verify the complete project with respect to Contract and Approved Drawings and Documents and submit the report to PMC. Hence the member of JIT put their seamless effort on the handover inspection and submit their report to PMC positively after fully satisfied and signed-off jointly on the report by the JIT members. Along with this certificate PMC is handing over the given below items to RAVAGO:

1. Complete Project Drawings and Documents in the form of Hard and Soft copies to RAVAGO for All Buildings and External site areas, including Punch List (PL).
2. Complete Door Keys.
3. Contractor Handover Letters-Original.
4. JIT Report-Original. {In addition to Punch List, JIT re-inspected the whole project after PL}.

As per Agreement between Asharq Al-Baeid and RAVAGO, Asharq Al-Baeid is fully responsible to provide the warranty services to RAVAGO as Defect Notification Period from the date of completion of Project till 365 calendar days (for 1 year period).

The above-mentioned Project has been completed satisfactorily and successfully in accordance with the Contract and Approved Drawings and Documents.

Thanks with Best Regard,

M. A. Lateef Zafer
 Project Manager-PMC.

QUALITY CONTROL PROGRAM

1.0 Company Policy and Scope Work

- 1.1 This Quality Control Plan is established to assure that all phases of construction and inspection and testing activities are performed in accordance with the requirements of the construction procedures, applicable codes, specification and drawings and that the Contractor's work, in general, is performed to a high standard of workmanship.
- 1.2 The Quality Control Manager is responsible for plan implementation and shall report directly to the Project Manager.
- 1.3 The Quality Control Manager has authority to identify problems, initiate corrective action, recommend solutions and stop work when necessary, or as directed by Construction Manager.

2.0 Qualifications of Quality Control Personnel

- 2.1 This section describes the Quality Control Organization, which will implement the Quality Control Plan.
- 2.2 The Project Manager:
 - 2.2.1 The Project Manager shall report directly to the Management of **Asharq Al-Baeid Management**.
 - 2.2.2 He shall be responsible for assuring compliance with the approved, Quality Control Plan for all construction, inspection and testing activities at the site.
 - 2.2.3 He shall be responsible, through his organization, for supervising the constructing work and assuring availability of adequate tools, equipment, manpower and supervision.

QUALITY CONTROL PROGRAM

- 2.2.4 He shall be responsible for procurement, receipt and storage of all materials.
- 2.2.5 He shall maintain a clean and safe site.
- 2.2.6 He shall represent the Contractor for all contractual matters and liaison with the construction manager.

2.3 The Quality Control Manager:

- 2.3.1 The Quality Control Manager shall report directly to the project manager
- 2.3.2 He shall be responsible for the implementation of the approved Quality Control Plan and assure compliance with the requirements of the contract specifications and drawings.
- 2.3.3 He shall maintain adequate qualified Quality Control Staff to perform all tasks required by the approved Quality Control Plan and contract specifications.
- 2.3.4 He shall be responsible for the preparation of all Quality Control, Inspection and Testing Procedures required for the implementation of the approved Quality Control Plan and compliance with the contract specifications.
- 2.3.5 He shall assign and direct the Quality Control Inspectors in the performance of specific responsibilities described through this Quality Control Plan.
- 2.3.6 He shall be responsible for reviewing all construction drawings to ensure that they contain the necessary quality related requirements prior to release for construction. Additionally, he shall review and approve all as built drawings prior to final acceptance and any revisions to the contract specifications prior to use.

QUALITY CONTROL PROGRAM

- 2.3.7 He shall direct the testing laboratory in the performance of necessary tests and review all test results for completeness and accuracy.
- 2.3.8 He shall verify that all samples, certificates of laboratory and fields tests and inspection reports comply with the contract requirements.
- 2.3.9 He shall oversee the vendor's quality control activities to ensure all materials, items and services supplied by the vendor comply with the requirements of the contract specifications.
- 2.3.10 He shall implement and maintain a filing system for all quality control procedures, records, reports, etc.
- 2.3.11 He shall review all purchase requisitions prior to issue in order to ensure the necessary QA/QC requirements are invoked.
- 2.3.12 He shall be responsible for receipt and inspection of all materials and equipment to be installed in the project, and for verifying that necessary storage and protection requirements are met.
- 2.3.13 He shall liaise with the construction manager on all quality control matters.
- 2.4 Quality Control Inspectors:
- 2.4.1 The quality control inspectors shall report directly to the quality control manager.
- 2.4.2 The quality control inspector shall perform the inspection and testing activities directed by the quality control plan/procedures and/or the quality control manager and shall record results of inspection and test on the inspection checklists and transmit these to the quality control manager for incorporation in the quality control report.
- 2.4.3 The quality control inspector shall implement the approved quality control plan as directed by the quality control manager.

QUALITY CONTROL PROGRAM

- 2.5 The Qualification Requirement for Quality Control Personnel shall be as follows:
- 2.5.1 The quality control manager must be college graduate with a bachelor of science degree in engineering or architectural, with a minimum of five years related experience.
- 2.5.2 The quality control inspector must have at least three years of related construction experience.
- 2.6 All contractor personnel (i.e. engineering, procurement, as well as quality control) shall be completely familiar with the requirements of the contractor's quality control plan.

3.0 Quality Control Plan and Procedure

- 3.1 Quality Control Manager:
- 3.1.1 The quality control manager shall be responsible for preparation, obtaining approval of, and issuing of the quality control plan and required inspection and testing procedures. The quality control plan prepared by the quality control manager shall be reviewed and accepted by the management of the contractor.
- 3.1.2 The quality control plan shall submitted to the construction manager for approval. The quality control manager shall be responsible for revising the quality control plan to the satisfaction of the construction manager.
- 3.1.3 the quality control manager shall distribute the approved quality control plan to the responsible supervisors in the field. Revisions to the quality control plan shall be controlled in the same manner as the original plan and require the same review and approval.

QUALITY CONTROL PROGRAM

- 3.1.4 During the life of the contract, the construction manager determines the quality control plan does not adequately cover all the inspection and testing requirements; the quality control manager shall revise the plan in accordance with the construction manager.
- 3.1.5 The quality control manager shall be responsible for notifying the construction manager in writing of any proposed changes to the quality control plan and obtain approval to implement the changes.
- 3.2 Inspection and testing Plan:
- 3.2.1 The quality control manager shall establish and prepare the necessary inspection and test plan based on the requirements of the quality control plan, contract specifications, applicable codes, standards, and drawings.
- 3.2.2 The inspection and test plan shall include a detailed description of each or portion of construction work to be inspected or tested, acceptance criteria, and use of inspection checklists for recording inspection and test data, the sequence nature or method of testing and responsibilities of the quality control inspectors and/or testing agency.
- 3.2.3 the inspection and test plan shall include the nature of samples to be taken, frequency of testing (to be shown on a schedule or checklist not a general procedure), and sampling criteria.
- 3.3 Construction Procedure:
- 3.3.1 The project manager shall be responsible for the establishment and qualification, when necessary, of construction procedures for processes required by the contract specifications.

QUALITY CONTROL PROGRAM

- 3.3.2 The construction procedures shall reference the applicable contract specification, job location and describe in the detail the applicable construction process. The procedure shall also establish the construction sequence, proper use and identification of materials and equipment, establish workmanship standards and functional performance parameters, when necessary.
- 3.4 The construction procedure shall be submitted to the construction manager for approval. All changes directed by the construction manager shall be incorporated in the applicable procedures and re-submitted for construction manager's final approval.
- 3.5 All the approved procedures shall be distributed to the responsible supervisors in the field. All revisions to the procedures shall be approved and controlled in the same manner as the original procedure.

4.0 Material Control

- 4.1 The material controller shall be responsible for establishing and implementing a material control program that describes controls for procurement, receipt and storage of material, equipment, sub-assemblies, components, parts, tools, instruments, etc., (hereinafter referred to us "materials & items") and services.
- 4.2 The purchase requisition shall be initiated by the responsible supervisor. The requisition shall include, but not be limited to the following information.
- 4.2.1 Description of materials or items, specification, standard, type, grade, etc.
- 4.2.2 Quantity
- 4.2.3 Identification and marking requirements
- 4.2.4 Testing and inspection requirements and applicable documentation, if any.
- 4.2.5 Reference to drawings and/or specification

QUALITY CONTROL PROGRAM

- 4.2.6 Packing/shipping instruction and location
- 4.3 The quality control manager shall be responsible for reviewing the purchase requisition and verifying that all necessary quality related requirements are included in the requisition, and also verify selection of 'Approved Vendor' on the final purchasing document.
- 4.4 The quality control manager and the material controller shall establish a list of 'Approved Vendors' based on past performance, and/or source inspection at the Vendor's plant. The quality control manager shall be responsible for assuring through surveillance inspection that the vendor's activities for the manufacture of materials and items or supply of services is performed in accordance with the requirements of the specification, which must be approved by the construction manager.
- 4.5 On receipt of materials or items, the materials supervisor and the quality control manager shall be responsible for inspecting the shipment for requirements of purchasing and shipping damages.
- 4.6 The material controller shall establish shortage requirements for all materials and items, and shall maintain the materials or items in proper storage until ready for construction
- 4.7 The quality control manager shall be responsible for surveillance inspection of materials and items in storage.

5.0 Construction Process Inspection and Test Control

- 5.1 The project manager shall be responsible for implementation of a construction process control program, which established construction requirements and sequence of operations. The quality control manager shall be responsible for establishing an inspection and testing program which provides verification and assurance be quality control, through inspection and testing that the construction complies with the requirements of the contract specifications.

QUALITY CONTROL PROGRAM

- 5.2 The construction procedures, inspection and test plan shall be used to establish the construction sequence and inspection requirements on the inspection checklist. The quality control manager shall be responsible for reviewing the inspection checklist to verify that all inspection requirements are included on the checklist. Construction manager shall be notified in writing, prior to commencement of construction activity, of all tests and inspections.
- 5.3 All inspection shall be performed by qualified quality control inspectors, during the construction activity. The results of inspection shall be documented on the inspection checklist.
- 5.4 Test Control:
- 5.4.1 Test shall be conducted according to written procedures. The construction manager or their appointed representative shall be notified in writing prior to the start of the start of all tests.
- 5.4.2 Reports of tests shall include test method, result of tests, computations, and acceptance criteria items tested, equipment used and environmental conditions, where applicable.
- 5.5 All the completed inspection checklists and test reports shall be reviewed and accepted by the quality control manager assuring that all materials and items incorporated in the work have been properly inspected and tested and comply with the applicable contractual technical requirement.

6.0 Calibration Control

- 6.1 The quality control manager shall be responsible for implementing a program that controls the identification, documentation, and when possible, segregation of materials items or conditions that do not conform to the requirements of the design specifications drawings and standards.

QUALITY CONTROL PROGRAM

- 6.2 The quality control manager shall maintain an instrument log of all equipment. The log shall include description, identification number, calibration date, calibration frequency, calibration due date, method of calibration, calibration record and equipment status.
- 6.3 All test and inspection devices shall be marked or tagged indicating the instrument number and due date of calibration. Calibration shall be traceable to the National Bureau of Standards or other approved internationally recognized standard.
- 6.4 Measuring devices shall be calibrated in accordance with requirements established in the instrument log sheet and shall be subject to controlled issue under the supervision of the quality control manager. The instrument shall be checked as satisfactory prior to the issue for specific test. When the instrument is returned it shall be inspected to assure that it is not returned in a damaged condition.

7.0 Non-conformance and Corrective Action

- 7.1 The quality control manager shall be responsible for implementing the program that controls the identification, documentation, and when possible, segregation of materials items or conditions that do not conform to the requirements of the design specifications drawings and standards.
- 7.2 If a non-conformity is suggested or known to exist, the materials or items not conforming shall be segregated and the quality control manager shall be responsible for initiating a non-conformance report.
- 7.3 When conditions exist which are adverse to quality, other than material conformity the quality control manager will initiate a non-conformance report.

QUALITY CONTROL PROGRAM

- 7.4 The project manager shall recommend a disposition for the non-conformity and obtain the concurrence and approvals of the construction manager.
- 7.5 The quality control manager shall be responsible for verifying that, the appropriate approved disposition is implemented by the construction supervisor.
- 7.6 The quality control manager shall review all nonconformance reports once a month and shall assure that appropriate corrective action is initiated and implemented to prevent recurrence of the non-conformity. He shall prepare a summary of all non-conformance and corrective actions and report it to the project superintendent and the construction manager.

8.0 Vendor Control

- 8.1 The quality control manager shall be responsible for approving manufacturers, fabricators, material manufacturers, material suppliers and suppliers for the subcontracted services, hereinafter referred collectively as VENDOR.
- 8.2 A program to audit vendors shall be initiated by the quality control manager. The audit team shall consist of specialists as applicable and approved by the quality control manager. The survey shall include a review of vendor quality control system at vendor's plant. The approval of a vendor may also be based on past performance evaluation along with the above review. The quality control manager shall maintain an approved vendor list.

QUALITY CONTROL PROGRAM

- 8.3 The quality control manager shall establish vendor surveillance activities on the purchase requisition. These activities may include, but not be limited to, the establishment of hold points and witness point in the manufacturing process, first piece inspection and release for shipment inspection. If the surveillance activities demonstrate unsatisfactory conditions the processing of materials or items shall be stopped at vendor's plant until a satisfactory review of his corrective action and results if necessary, ensures that implementation of corrective action is accomplished.

9.0 Record and Document Control

- 9.1 The quality control manager shall be responsible for initiating and implementing a program that controls the collection, storage and maintenance of quality control records generated throughout construction.
- 9.2 Records shall be maintained and stored in such a manner as to preclude deterioration.
- 9.3 Prior to the construction manager's acceptance of a specific site, the contract requirements for transferring records to the construction manager for final storage shall be defined and implemented. When records are not transferred to the construction manager they must be maintained for the period of warranty specified in the contract, by the contractor.
- 9.4 The quality control manager shall monitor to assure that the document control procedure is implemented in the field.

SAFETY PROGRAM

1.0 Organization

- 1.1 Duties Responsibilities and Authorities of Authorized Representatives (Safety Officer).
 - 1.1.1 Be responsible for administration arrangement, operations and directions of accident prevention program.
 - 1.1.2 Establish and maintain safety rules and requirements.
 - 1.1.3 Provide technical assistance to eliminate or control unsafe behavior and environment.
 - 1.1.4 Conduct accident investigations and reporting and check completeness and accuracy of corrective actions.
 - 1.1.5 Recommended appropriate action to remove or control hazard and conduct follow-up inspection in insure compliance,
 - 1.1.6 Conduct safety orientation for all newly hired employers.
 - 1.1.7 Instruct and educate the site engineers and foremen who are designated to follow the various kinds of construction procedures and report all injuries no matter how minor they may be.
 - 1.1.8 Establish and conduct discipline and punishment to the violators of safety regulations rules and/or requirements such punishment includes transfer from one post to another or ultimately, dismissal.
 - 1.1.9 Be responsible to supervise the safety organization.
 - 1.1.10 Report accidents and relating safety matters to the Royal Commission and maintain all records relating to safety, which are required.
- 1.2 Duties, Responsibilities and Authorities of Safety Supervisor
 - 1.2.1 Assist the safety officers to eliminate and control unsafe behavior and environment.
 - 1.2.2 Periodically inspect, and order maintenance of safety tools, protection tools fire extinguishers etc.

SAFETY PROGRAM

- 1.2.3 Conduct accident investigations and reporting recommend appropriate action to remove or control the use of gasoline and similar flammable products in conduct follow-up inspections to insure compliance.
- 1.2.4 Be responsible to prevent fire hazards.
- 1.2.5 Supervise and control the activities of the safety engineer.
- 1.2.6 Plan and conduct safety surveys and inspections giving particular attention to accident hazards and all new operations as the works progress.
- 1.2.7 Instruct and educates any employees who become safety representative on various construction activities and rescue them to report all injuries no matter how minor they may be.
- 1.2.8 Be responsible to establish and maintain safety facilities signboards.
- 1.2.9 Be responsible to establish and maintain discipline in all areas.

2.0 Education and Orientation

- 2.1 Instructions and guidelines will be provide by the safety engineer and/or foreman, as is required by the changing nature of the work and personnel.
- 2.2 Any work area, which is considered hazardous, will be tagged. Barricade and appropriate warning signs will be posted.
- 2.3 The same safety practices procedures; orientation and instructions are to be provided to subcontractors working on the site.
- 2.4 Should it be deemed necessary, meetings will be held on site to re-educate employed personnel to safety requirements.

SAFETY PROGRAM

3.0 Safe Work Practices and Procedures

3.1 The safe practices describe in this chapter are for employees protection.

All employees shall read and observe them, Accidents happen without warning, and many are caused by lack of knowledge, inattention and carelessness.

Lack of knowledge of these safe practices will not be justify non-compliance.

3.2 General

3.2.1 Know how to do your job. Check your works area to determine what problems and hazard may exist. Your activity may endanger fellow workers or nearby equipment and materials. Take necessary steps to safeguard them. Review the safety requirements or each assigned job with your supervisor you will not be expected to do a job, which might result in injury, to yourself or others.

3.2.2 Be sure you understand emergency instructions anticipate what you will do in case of emergency.

3.2.3 Report un-safe equipment, hazardous conditions and un-safe acts, to your supervisors.

3.2.4 Use safety equipment when it is required.

3.2.5 Practice good housekeeping in your work area. Do not leave materials, which will be hazardous to others.

3.2.6 For your protection, obey all warning signs such as **“KEEP OUT”**, **“NO SMOKING”** and **“AUTHORIZED PERSONNEL ONLY”**.

3.2.7 Do not use compressed air or oxygen to blow dust or dirt clothing.

SAFETY PROGRAM

- 3.2.8 Carbon Tetra Chloride must not be used for any purpose on the job.
- 3.2.9 Adequate sanitary facilities provided on the job-site do not use any other area.
- 3.2.10 Failure to follow practices relating to your safety or that fellow employees.

3.3 Housekeeping

Good housekeeping is an important part of the safety program. It is the responsibility of all employees, supervisors and craftsman alike. To practice good housekeeping.

- 3.3.1 Scrap materials and rubbish are fire accident hazards. If an excess of these materials exist in your work area, ask your supervisor to arrange for their removal.
- 3.3.2 You must use the trash containers, which are located on the job-site. If you need one in your immediate work area notify your supervisors.
- 3.3.3 Return all surplus materials to the stockpile at the completion of your job.
- 3.3.4 Do not leave tools and materials where they will create a hazard for others. Put them in the box or return them in the tool store.
- 3.3.5 Wipe up spilled oils immediately, if you cant handle the problems notify your supervisor so that he can arrange lot the necessary clean-up.
- 3.3.6 Keep rooms 'clean. Do not let soiled clothes, food scraps and soft drinks bottles accumulate. If drinking cups are used, deposit them in the containers provided. Also place wrappers, paper bags and other trash in these containers.

SAFETY PROGRAM

3.3.7 Toilet facilities, and drinking fountains are provided for your convenience and comfort. Please help to keep them clean and sanitary.

3.4 Personal Protective Equipment:

Personal protective equipment is available for your use. When equipment has been specified for certain work assignment or areas, you must use it.

3.4.1 All employees, visitors and vendors must wear a hard hat in designated hardhat areas.

3.4.2 You must wear clothing suitable for the work you are doing.

3.4.3 You must wear proper eye protection when exposed to flying objects, dust or chemicals.

3.4.4 Hearing protective equipment must be used when directed by safety engineer or foreman.

3.4.5 Respiratory protective equipment is required in areas where health hazards exist due to accumulate of dust, fumes, mists or vapors.

3.4.6 Safety belts and lifelines must be used when other safeguards, such as nets, planking or scaffolding cannot be used. Be sure that safety lines are independent of other rigging. The lanyard must be secured at or above the level of the belt.

3.4.7 Gloves must be worn when handling objects or substances, which could cut, tear or burn the hands.

3.4.8 Rubber boots must be worn for work in concrete, mud or water.

3.4.9 Electricians using insulated gloves must inspect them for defects.

3.4.10 Situations that may require unique safety equipment and special training shall be discussed with the safety department.

SAFETY PROGRAM

3.5 First Aid

- 3.5.1 Report all injuries immediately, no matter how minor, to your supervisor. Treatment will be given, and the incident will be recorded. Should later medical care be needed, you will have a record in First Aid of your injury.
- 3.5.2 You must notify your supervisor prior to leaving the jobsite because of a work related injury or illness.
- 3.5.3 Drugs, tranquilizers and insulin must not be taken on the job unless authorized in writing by your personal physician and in all instances your supervisor be notified.
- 3.5.4 Any employee who has physical handicap, such as diabetes, impaired eyesight and hearing, back or hernia or fear of heights, tell your supervisors, you wont be expected to do a job which might result in injury to yourself or others.
- 3.5.5 First Aid teams are organized and trained to render assistance. In the event of an injury or illness you will get proper first aid treatment.
- 3.5.6 Never move and injured or seriously ill person unless necessary to prevent farther injury. Emergency steps regarding First Aid are posted throughout the jobsite. Familiarized yourself with them.

First Aid should not be administered by non-designated employees except in case of severe bleeding or cessation of breathing.

3.6 Electrical

- 3.6.1 All electrical tools and equipment must be grounded or doubled insulated.

SAFETY PROGRAM

- 3.6.1 All electrical tools and equipment must be grounded or doubled insulated.
 - 3.6.2 Damaged or defective electrical tools must be tagged cut off service and returned immediately.
 - 3.6.3 Electricians are the only employees authorized to repair electrical equipment. Tampering with or the unauthorized repair of electrical tools or equipment is prohibited.
 - 3.6.4 Temporary electrical cords must be covered or elevated wherever possible. They must kept clear of walkways and other location where they may be exposed to damage or create tripping hazards.
 - 3.6.5 Splices in electrical cords must retain the mechanical and electrical strength of the original cable and must be jointed in a safe manner.
 - 3.6.6 Temporary lighting must have guards over the bulbs. Broken and burned out lamps be replaced immediately.
 - 3.6.7 Energized wiring in junction boxes, circuit breaker panels and similar places must be covered at all times.
 - 3.6.8 Hazardous areas must be tagged barricaded and/or appropriate warning signs posted.
 - 3.6.9 Employees must not work on or in proximity to energized circuits of any voltage unless adequate safety measures have been taken and the work operation has been reviewed and approved by the safety supervisor.
- 3.7 Hand and Portable Power Tools
- 3.7.1 A craftsman is evaluated by the condition of their tools and how they uses them only tools in safe working condition will be issued from the tool room. You must comply with all of the manufacturers instructions. In addition observe the following safe practices.

SAFETY PROGRAM

- 3.7.2 Inspect your tools daily to ensure that they are in proper working order. Damaged or defective tools must be returned immediately for repair.
- 3.7.3 Power saws, grinders and other power tools must have proper guards in place at all times. Removing guards or rendering them inoperative may be grounds for discharge.
- 3.7.4 Power tools should be hoisted or lowered by handles or bucket, never by the cord or hose.
- 3.7.5 To prevent employees from tripping and falling, cords and hoses must be kept out of walkways, off stairs and ladders. They must be secured a minimum of 2.2m above walkways, runways and ramps, wherever possible, so as not to create a tripping hazard or to be subjected to damaged from equipment or materials.
- 3.7.6 When using the tools listed below near others using such tools, you must use additional personal protective equipment specified. If you have question about tile protective equipment or safety rules ask your supervisor.

-Jackhammer, Tamers Eye protection, Hearing Protection and Foot Protection.

-Chipping Hammers, Impact Wrenches, Reamers Eye protection, Hearing Protection

-Cutting Torches, Welders Eye protection, Hearing Protection.

SAFETY PROGRAM

-Power actuated, Tools, *Eye protection
Grinders, Hand-held
Chipping Hammers

EYE PROTECTION

*Safety glasses or mono
goggles.
**Burning goggles/
welding hood.

- 3.7.7 All portable electric tools must be grounded (except underwriters laboratory approved, double insulated tools).
- 3.7.8 An approved safety check valve must be installed at the manifold outlet of each supply line for hand-held pneumatic tools.
- 3.7.9 All pneumatic hose connection must be fastened securely.
- 3.7.10 Safety clips or retainers must be installed in all pneumatic tools to prevent the accidental expulsion of the tools from the barrel.
- 3.7.11 All fuel-powered tools must be shut down while being refueled smoking is prohibited during refueling operations.
- 3.7.12 Only employees who possess valid credentials are permitted to use power-actuated tools. Follow all manufacturers instructions when using power-actuated tools.

3.8 Material Handling Storage and Disposal

- 3.8.1 All material must be properly stacked and secure to prevent sliding, falling or collapse.
Aisles, stairs and passageways must be kept clear to provide for the safe movement of employees and equipment and to provide access in emergencies.
- 3.8.2 Use proper lifting techniques when handling materials.

SAFETY PROGRAM

- 3.8.3 Stored materials must not block any exit from a building.
- 3.8.4 Materials stored inside buildings structures under construction must not be placed within 1.80m of any hoist way or other inside floor opening, not within 2.0m of any exterior wall which does not extend above the top of the material stored.
- 3.8.5 Pipe, conduit and bar stock should be stored in racks or stacked and blocked to prevent movement.
- 3.8.6 The quantity of materials stored on scaffolds, platform or walkways must not exceed that required for 1 day operation or the rated capacity of scaffold or platform.
- 3.8.7 Materials must never be thrown or dropped from a distance of more than 6 meters. The drop area must be barricaded to protect personnel from being struck by falling materials.
- 3.8.8 Protruding nails must be bent or fold stripping forms or uncrating materials.
- 3.8.9 Materials must not be stored in such a way that they block access to fire exits or emergency equipment.
- 3.9 Cranes, Hoist, Motor Vehicles and Heavy Equipments
 - 3.9.1 All cranes, hoists, motor vehicles and heavy equipment must be operated and maintained to conform to the established standards.
 - 3.9.2 All cranes, hoists, motor vehicles and heavy equipment must be inspected prior to use. All deficiencies must be repaired before the equipment is used.
 - 3.9.3 Operators should take signals from only one man in an emergency however, any one can give a stop signal.
 - 3.9.4 Only standard hand signals will be acknowledged.
 - 3.9.5 Routine maintenance, fueling or repairs must not be performed while the equipment is in use or power is on.

SAFETY PROGRAM

- 3.9.6 When handling or recharging batteries or using. Jumper cables, wear safety glasses.
 - 3.9.7 Accessible areas within the swing radius of all cranes should be barricade to prevent employees from being crushed by the counter weight.
 - 3.9.8 A designated employee must observe clearance of the equipment and give timely warning for all operations where the operator's vision is obstructed.
 - 3.9.9 The parking brake must be set whenever the vehicle is parked.
 - 3.9.10 The erection and operation of personnel hoists must conform to established standards.
 - 3.9.11 Prior to placing a hoist into service, functions and safety services must be tested thoroughly under the supervision of qualified personnel.
 - 3.9.12 The erection and operation of material hoists must conform to established standards.
 - 3.9.13 A sign stating, "NO RIDERS ALLOWED" must be posted on the car frames an at each landing. Employees are prohibited from riding material hoists except for the authorized purpose of inspection and maintenance.
 - 3.9.14 Rated load capacity charts, recommended operating speeds, special hazard warnings and other essential information must be conspicuously posted in all cranes, hoists and other equipment.
- 3.10 Ladders
- 3.10.1 Job-made ladders must be constructed to conform to the established OSHA/MSHA standards.
 - 3.10.2 Broken or damaged ladders must not be used. Repair or destroy them immediately. Ladders to be repaired must be tagged "DO NOT USE" and removed from the work area.
 - 3.10.3 Do not splice together short ladders to make a longer ladder.

SAFETY PROGRAM

- 3.10.1 Job-made ladders must be constructed to conform to the established OSHA/MSHA standards.
 - 3.10.2 Broken or damaged ladders must not be used. Repair or destroy them immediately. Ladders to be repaired must be tagged “**DO NOT USE**” and removed from the work area.
 - 3.10.3 Do not splice together short ladders to make a longer ladder.
 - 3.10.4 All straight ladders must be tied of at the top or otherwise secured to prevent movement.
 - 3.10.5 Metal ladders must not be used for electrical work or in areas where they could contact energized wiring.
 - 3.10.6 Ladders should not be placed against movable objects or project into passageways without protection.
 - 3.10.7 The base of the ladder must be set back a safe distance from the vertical approximately one fourth of the working length of the ladder.
 - 3.10.8 Ladders used for access to a floor or platform must extend at least 0.90m above the landing area.
- 3.11 Scaffolding
- 3.11.1 Each scaffold must be inspected and approved by tile foreman, prior to initial use, after alteration or moving.
 - 3.11.2 There is no such thing as a temporary scaffold. All scaffolds must be erected and maintained to conform to established standard.
 - 3.11.3 Guardrails, midrails and toe boards must be installed on all open sides of scaffolds when in use. They should constructed for components furnished by manufacturer or from 50mm x 100mm lumber.
 - 3.11.4 Scaffolds planks must be at least 50mm x 300mm full thickness lumber, structural grade equivalent, they must be cleaved or secured and must extend over the end supports at least 150mm, but not more than 300mm.

SAFETY PROGRAM

- 3.11.5 All scaffolds must be fully planked no employee must work from a single plank.
 - 3.11.6 Scaffold plank must be visually inspected before use.
 - 3.11.7 Access ladders must be provided for each scaffold. Climbing off the end frames is prohibited unless their design incorporates and approval ladder.
 - 3.11.8 Scaffolds must be tied off to the building or structure.
 - 3.11.9 Do not overload scaffolds. Materials should be brought up as needed. Remove excess materials and scrap from scaffold when work is completed.
 - 3.11.10 Barrels, boxes, kegs and similar unstable object must never be used as work platforms or to support scaffolds.
 - 3.11.11 Unauthorized personnel shall not alter scaffolds or work platforms.
- 3.12 Cutting and Welding Operations
- 3.12.1 Cutting and welding operations have a high potential for personnel injuries and fires.

When performing either, you must always follow these precautions.
 - 3.12.2 Before starting to cut or weld , you must inspect your work are to ensure that sparks or melted metal wont fall on combustible material. If you cant provide the necessary safeguard check with supervisor.
 - 3.12.3 When burning or welding, you must wear approved eye protection goggles, face shields or welding helmets. Always use the recommended protectors for the application of tile specific working operations.

SAFETY PROGRAM

- 3.12.4 Never weld or burn oil barrels, tanks, piping or other systems, which may have contained either combustible or unknown products, without first obtaining approval from safety representative or other responsible authority.
 - 3.12.5 The protective caps must be kept on all cylinders not in actual use.
 - 3.12.6 All cylinders must be properly secured to prevent tripping.
 - 3.12.7 Oxygen and acetylene (or other fuel gas) cylinders in storage must be separated from each other.
 - 3.12.8 Welding, burning and heating performed in confined spaces may require general mechanical or local exhaust ventilation to reduce the concentrations of smoke and fumes to acceptable levels. Safety representative must be consulted prior to starting these operations.
 - 3.12.9 If adequate ventilation cannot be provide, employees must be provide with and required to used air supplied breathing apparatus.
 - 3.12.10 When welding, cutting or heating metals having toxic significance such as zinc, lead, cadmium or chromium bearing metals, in the open air, you must wear filter-type respirators.
- 3.13 Excavation and Trenches
- 3.13.1 Trenches 1.50m or deeper must be shored or sloped back to the angle of repose. Any excavation in unstable soil may require shoring or sloping.
 - 3.13.2 All materials from excavation must be placed at least 0.50m form the edge of falling excavation. Precautions must be taken to prevent such materials falling into the excavation.
 - 3.13.3 All excavations should be properly barricaded.

SAFETY PROGRAM

- 3.13.4 Safe access must be provided in to all excavations by means of ladders, stairs or ramps.
- 3.13.5 All excavation should be backfilled and properly consolidated and the surface left in good condition, as soon as practical.
- 3.14 Project Site Traffic Regulations
 - 3.14.1 All person driving a vehicle on the project site must observe the project site traffic regulations. A vehicle is defined as any type of vehicles or construction equipment cable of movement on project roads.
 - 3.14.2 Drivers should not exceed speed limits.
 - 3.14.3 Do not cut back to your side of the road, after passing another vehicle, until you are sure it is safe to do so.
 - 3.14.4 Do not run your vehicle side by side with another vehicle going in the same direction of travel.
 - 3.14.5 Driver should slow down when driving through all congested areas. Give pedestrian traffic full consideration.
 - 3.14.6 Do not cut corners—keep on the right-hand side of the other road until you make your turn and enter the road into which you are turning on the right-hand lane of the road.
 - 3.14.7 When approaching slow moving vehicles, animals, an accident or anything unusual-slow down.
 - 3.14.8 Do not drive on the shoulder of the road.
 - 3.14.9 Do not follow the vehicle in front of you too closely (Do not tail gate).
 - 3.14.1 Drivers shall not drive around barricades in the roadway or on the side of the road, which is barricaded.
 - 3.14.11 Any emergency vehicle, when responding to an emergency-call, shall have the right of-way over all other traffic.

SAFETY PROGRAM

- 3.14.12 Drivers shall not pass any vehicle in a “NO PASSING” zone. A no passing zone is indicated by sign and by a solid line on one or both sides of the broken center line. If the solid line is on the drivers side of the broken centerline—Do Not Pass.
- 3.14.13 Drivers shall use the vehicle horn sparingly to indicate their intention to pass another vehicle.
- 3.14.14 Do not carry more than three persons in the front seat of any vehicles. This includes the driver.
- 3.14.15 Drivers shall not permit passenger to exit any vehicle until it has not to a complete stop. Look in both directions before opening vehicle door.
- 3.14.16 All passenger shall, while vehicle is in motion, keep arms and legs inside windows of pick-ups and trucks. No employee shall stand-up inside back of trucks and pick-ups while in motion.
- 3.14.17 Passengers are not allowed to ride on he top of mate rial loads.
- 3.14.18 Drivers shall not leave vehicles unattended with any door open.
- 3.14.19 Drivers shall check to the rear of his vehicle before backing from a parking space, to ensure that no object is in the path of the vehicle.
- 3.14.20 When transporting material or equipment, all such loads shall be made secure with binders to prevent movement of the load.
- 3.14.21 Any spillage onto the roadway from hauling vehicles, such as sand, rock or other material, shall be immediately remove from the roadway.

SAFETY PROGRAM

3.14.23 All vehicles shall be equipped with two (2) headlights, functional tail lights turn signal lights, also stop lights which are to be kept in adjustment at all times.

Note: Each driver shall inspect his vehicle to insure that all lights are operating properly.

3.14.24 Vehicle wheel and brake shall be maintained in good conditions at all times.

3.14.25 Drivers shall kept windshield, headlights, taillights, rear-mirror clean at all times.

3.5 Safe Passage

3.15.1 Safe passages should be marked to distinguish from work area.

3.15.2 Materials or hazards should be kept out of safe passageways.

3.15.3 Designated safe passageways shall be kept clear from any obstacles for all vehicles and pedestrians.

4.0 Violation Control and Punishment

4.1 To insure safety, disciplinary measures shall be imposed to violators of safety regulations, rules and/or requirements, for instance;

4.1.1 Anyone whose thoughtlessness, inattention or lack of knowledge has resulted in injury or property damage.

4.1.2 Any one whose violation of safety or security regulation has resulted in property damage or hindrance to the orderly working operations.

4.1.3 Any one who fails to report any kind of accident or tries to cover up one.

SAFETY PROGRAM

- 4.1.4 Any one who misleads or cooperates with the actions described above in Article 5.0, Clause 5.1.1, 5.1.2 and 5.1.3.
- 4.1.5 The severity of punishment will be decided by the site supervisor initially. In case of compliance, these will be referred to the branch office.

5.0 Accident Reporting Procedure

- 5.1 All accidents that occur on the project site or enroute to and from the project site are to be reported immediately.
